

Woodland creation areas within this area may be expanded to match woodland creation on adjacent land to the north.

Road construction and other engineering works require a detailed assessment in this area due to slope instability.

Note on Target areas for woodland creation. The timing of these operations may fall outside 10 years, and the layout may differ following detailed assessment. More detailed assessment in terms of planting design, timing and site constraints is required for the EIA determination.

Glen Croe Land Management Plan

M6: EIA Determination Requirements

- Legend**
- - - Planned Forestry Roads (1939m)
 - Proposed New Ranger Tracks 4594m
 - - - Restock ATV Tracks 8400m
 - Target areas for woodland creation. 43.77Ha
